

Equipment

At the Peter Osypka Institute for Pacing and Ablation it is possible to practice all the important processes of Electrocardiology: From a simple routine ECG beyond the current modern electronic cardiac implants with their Internet-based remote monitoring systems Home Monitoring® and CareLink® to high-frequency catheter ablation using imaging techniques as CARTO®, CARTO® XP Merge and Real-Time position management® offer as individual laboratory spaces. Here, students, medical technicians from the industry and physicians or who it wants can test on simulators, their knowledge and the operation of various methods and equipment and experience in detail.
